                              The invention relates to a novel RNA derived from an ALPV (Aphid lethal paralysis virus). ALPV RNA is useful for controlling homopterous insects such as aphids or white files. It is useful in the research concerning aphids and for controlling aphids and in the field of agriculture or floriculture. It is also useful for detecting ALPV- viruses using PCR and for preparing a monoclonal antibody against antigen which is synthesised in vitro. The invention is also useful in gene therapy. The present

                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to to a cell-free protein synthesis system derived from wheatgerm where there is substantial exclusion of wheatgerm embryo albumen impurities. The novel system uses a sequence having a higher-order RNA structure that promotes translation activity. The higher-order sequence is preferably a "pseudoknot", especially derived from a range of viruses (ABZ80707-ABZ80713). This sequence represents the "pseudoknot" higher-order sequence from the Drosophila C virus. The sequence is used in a construct which may also include an intergenic region and internal ribosome entry site (IGR-IRES). The method is applicable in producing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Cell-free protein synthesis means in wheatgerm system to establish overexpression of target gene with base sequence sustaining translation activity and function promotion, for producing useful proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Nakashima N,

```
The invention comprises seven RNA sequences (CrPV-like viruses) which have a higher-order structure that sustains translational activity-promoting function. The RNA sequences of the invention are useful in the synthesis of proteins and polypeptides for application in developing and producing drugs. The RNA sequences of the invention are also useful in basic research of protein synthesis and structural analysis by the gene recombinant technique. The present nucleotide represents a Drosophila C virus RNA sequence of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Translational activity-promoting higher-order structure of CrPV-like viruses for protein translation when suitably initiated, useful in synthesis of proteins and polypeptides of foreign species for applications.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CrPV-like virus; ss; higher-order structure; drug drug production; translational activity-promoting
                                                                                                                                                                                                                                                                                                                                                            Sequence 201 BP; 61 A; 33 C; 35 G; 0 T;

                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to to a cell-free protein synthesis system derived from wheatgerm where there is substantial exclusion of wheatgerm embryo albumen impurities. The novel system uses a sequence having a higher-order RNA structure that promotes translation activity. The higher-order sequence is preferably a "pseudoknot", especially derived from a range of viruses (ABZ80707-ABZ80713). This sequence represents the "pseudoknot" higher-order sequence from the Cricket paralysis virus. The sequence is used in a construct which may also include an intergenic region and internal ribosome entry site (IGR-IRES). The method is applicable in
                                                   Cricket paralysis virus RNA sequence

promoting function. The RNA sequences of the invention are useful in the
synthesis of proteins and polypeptides for application in developing and
producing drugs. The RNA sequences of the invention are also useful in
basic research of protein synthesis and structural analysis by the gene
recombinant technique. The present nucleotide represents a Cricket
paralysis virus RNA sequence of the invention
                                                                                                                                                                                                                                         12-JUL-2002

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      용
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention describes a novel method for determining the degree of CC methylation of a particular cytosine in a motif 5'-CpG-3', present in a CC genomic sample of DNA. The sample is treated chemically to convert CC cytosine (C) but not methylated C, to uracil, then part of the genomic CD DNA that contains the target C is amplified to form a labeled amplicon. CC The amplicon is hybridised to two classes, each with at least one member, CC of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the CC degree of hybridisation to both classes is determined from the label on CC the amplicon. From the ratio of labels hybridised to the two classes of CC oligomers, the degree of methylation is calculated. The method is used: CC oligomers, the degree of diseases, e.g. cancer, disorders of the central CC or disgnosis and/or prognosis of side effects of therapeutic drugs CC and of a wide range of diseases, e.g. cancer, disorders of the central CC nervous, cardiovascular, gastrointestinal and respiratory systems etc., CC particularly by detecting mutations or single nucleotide polymorphisms CC (SNP's); and (ii) for differentiation of cell or tissue types and for CC investigating cell differentiation. The method allows the methylation CC status of many C residues to be determined simultaneously. ABQ13410-CC ABQ54121 represent genomic DNA sequences used to illustrate the method CC disclosure of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This invention describes a novel method for determining the degree of CC methylation of a particular cytosine in a motif 5'-CpG-3', present in a CC genomic Sample of DNA. The sample is treated chemically to convert CC grosine (C) but not methylated C, to uracil, then part of the genomic CC DNA that contains the target C is amplified to form a labeled amplicon. CC The amplicon is hybridised to two classes, each with at least one member, CC of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the CC degree of hybridisation to both classes is determined from the label on CC the amplicon. From the ratio of labels hybridised to the two classes of CC oligomers, the degree of methylation is calculated. The method is used: CC (i) for diagnosis and/or prognosis of side effects of therapeutic drugs CC and of a wide range of diseases, e.g. cancer, disorders of the central CC nervous, cardiovascular, gastrointestinal and respiratory systems etc., CC particularly by detecting mutations or single nucleotide polymorphisms CC (SNP's); and (ii) for differentiation of cell or tissue types and for crestiques to be determined simultaneously. ABQ13410-CC ABD54121 represent genomic DNA sequences used to illustrate the method CC disclosure of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CC The invention relates to an isolated polypeptide encoded by a breast CC cancer marker gene comprising any of 1417 21-805 nucleotide sequences, CC given in the specification. The methods of the invention are useful for CC diagnosing patients having an identified breast mass or symptoms CC associated with breast cancer, to diagnose breast cancer or its CC precursors, and for monitoring the efficacy of treatment of a breast CC precursors and for monitoring the efficacy of the methods are also CC useful for evaluating a patient before, after or during therapy, to CC useful for evaluating a patient before, after or during therapy, to CC evaluate the reduction in a tumour burden. The breast cancer marker gene CC useful as bait proteins in a two-hybrid or three-hybrid assay, to CC dientify other proteins which bind to or interact with the marker CC identify other proteins in a two-hybrid or three-hybrid assay, to CC genes for one or more disorders, disease states or conditions leading to CC disease states, in particular, breast cancers. The breast cancer marker CC genes for one or more disorders, disease states or conditions leading to CC disease states, in particular, breast cancers. The breast cancer marker cencer genes are useful as pharmacodynamic marker genes. An antibody which CC invention is useful for producing non-human transgenic animals. This CC of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a nucleic acid comprising a sequence of 18 CC bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with CC bisuphite, of genes associated with tumour suppression and oncogenes CC having a sequence taken from 536 (actually 533 since numbers 408, 458 and CC 500 are missing from the sequence listing) sequences (SS) and sequences (CC oligomer (PNA) of at least 9 nucleic acid may be a peptide nucleic acid complementary to (SS). The nucleic acid may be a peptide nucleic acid conjugate of a set of CC probes for detecting the cytosine methylation state and/or single CC diseases associated with CpG dinucleotides and may form part of a set of CC probes can also be used in a marray for analysing CC diseases associated with CpG dinucleotides e.g. cancers and tumours. The CC potentic parameters for the diagnosis and/or therapy of existing CC diseases or the predisposition to specific diseases, by analysing CC cytosine methylations. The parameters may be compared to another set of CC genetic and/or epigenetic parameters, the differences serving as basis CC patients. The present sequence is one of the 533 genomic sequence of considering odd numbers are the complementary sequence with even corresponding odd numbers are the complementary sequence of the corresponding odd numbers are the complementary sequence of the sequence data for this patent did not form part of the printed corresponding odd numbered sequence (e.g. ID 2 and ID). ID 536 and ID CC sequence data for this patent did not form part of the printed cat form with only might and part of the printed corresponding odd numbers are the complementary sequence of the specification, but was obtained in electronic format directly from WIPO cat first value.
                                                                                                                                                                                                                                                                                                                                                                                                                 Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Nucleic acid comprising diagnosis and treatment

RJ39 mRNA is expressed in receptacle tissue and expression levels coding sequence was obtained by PCR amplification of strawberry genomic CDNA. A 400 base radiolabelled probe was prepared from the clone and used CC DNA. A 400 base radiolabelled probe was prepared from the clone and used CC containing the promoter and the complete coding sequence. To remove the CC portion of coding sequence, a BglII restriction site was introduced CC upstream of the RJ39 initiation codon by PCR amplification of the CC promoter clone with primers pRJ39-3N1 and T7 promoter primer. Restriction CC digestion produced a truncated RJ39 promoter able to be inserted into a CC digestion produced a truncated RJ39 promoter gene and a termination region cito this vector, a DNA construct can be generated. Once this construct is introduced into a plant, the target gene is expressed in increasing CC levels in receptacle tissue as the fruit matures. Using DNA constructs containing this promoter, it is possible to introduce fruit-specific improvements in plants where the edible fruit comprises receptacle tissue c., strawberries, apples and pears. Such commercially and cresistance to graculturally beneficial modifications may include an increase in the congriser content in fruits, resistance to plant diseases and resistance to

                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                                                                                                                                              Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to novel DNA and protein sequences which Care associated with carcinomas. The sequences are useful for: (i) for Screening drug candidates; (ii) for screening of bioactive agent capable of binding to Carcinoma Associated Protein (CAP); (iii) for screening of a bioactive agent capable of modulating the activity of CAP; (iv) for carcinoma; (vi) for inhibiting the activity of CAP; (vi) for diagnosing carcinoma; (vii) for neutralizing the effect of AP; (vii) for treating carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip; (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma are supplied (CA) gene copy number. In addition, the CAP genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA coding sequence. Note: This patent is an equivalent to basic patent US2002182586A1, for which no sequence data was published
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches

                                                                                                                                                                                                                                                                                                               The invention comprises DNA sequences which confer an altered metabolic characteristic when they are expressed in a plant. The DNA sequences of the invention are useful for producing plants with an altered metabolic characteristic, such as: altered acid metabolism, alcohol metabolism, fatty acid metabolism, branched fatty acid metabolism, alkaloid or other base metabolism, altered amino acid metabolism, altered ester metabolism, altered glyceride metabolism, altered phenolic metabolism, altered carbohydrate metabolism, altered skyrom entabolism, hydrocarbon metabolism, altered or akynom entabolism, hydrocarbon metabolism, ketone or altered siease resistance in a plant and gene shuffling or sexual PCR procedures. The present nucleic acid represents a DNA sequence of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel genes that confer altered metabolic characteristics in Nicotiana benthamiana plants, useful for altering the levels of metabolites e.g. acids, fatty acids, amino acids, carbohydrates, hydrocarbons and sterols.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   amino acid metabolism; ester metabolism; glyceride metabolism; phenolic metabolism; carbohydrate metabolism; sterol metabolism; terpene metabolism; isoprenoid metabolism; alkene metabolism; alkyne metabolism; hydrocarbon metabolism; ketone metabolism; alkyne metabolism; disease resistance; gene shuffling; sexual PCR; quinone metabolism; disease resistance;

Sequence 16354, Application US/09270767

Patent No. 6703491

GENERAL INFORMATION:
APPLICANT: Homburger et al.
TITLE OF INVENTION: Nucleic acids and proteins of FILE REFERENCE: File Reference: 7326-094

CURRENT APPLICATION NUMBER: US/09/270,767

CURRENT FILING DATE: 199-03-17

NUMBER OF SEQ ID NOS: 62517

SOFTWARE: PatentIn Ver. 2.0
                                                                                                                                                                                                                                RESULT 2
US-09-270-767-16354

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           US-09-270-767-16354
Sequence 17150, Application US/09949016
Patent NO. 6812339
GENERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
APPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
FILE REFERENCE: CL001307
CURRENT APPLICATION NUMBER: US/09/949,016
CURRENT FILING DATE: 2000-04-14
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 2, Application US/09020033A
Patent No. 6043410
GENERAL INFORMATION:
APPLICANT: Wilkinson, Jack Q.
TITLE OF INVENTION: Strawberry Fruit Promoters for Gene Expression
FILE REFERENCE: Strawberry Promoters for Gene Expression
CURRENT APPLICATION NUMBER: US/09/020,033A
CURRENT FILING DATE: 1998-02-06
                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
